DATABASE <sup>1</sup>	
Name of the database	<b>FireAleppoGreecePlant Database</b> : a database concerning all plant taxa recorded across post fire chronosequences of <i>Pinus halepensis</i> forest stands in Central Greece. For each taxon, its abundance across all stands where it has been recorded is provided together with its fire-related life traits. No URL address
Scientific information	Scientific domain(s) Fire ecology Objectives: This database acts as a data source for the plant biodiversity of <i>Pinus halepensis</i> forests in Central Greece and as a reference material for the assessment of post-fire resilience of such plant communities. Characteristics of the stored data: For each taxon the provided information concerns: (1) taxonomical status, (2) abundance trends across post-fire chronosequences (numerical), (3) growth form, (4) fire related fire traits (e.g., resprouting, seed bank formation, etc) (nominal)
Keywords	Post-fire chronosequence, life traits
Technical information	Language in which the field names are expressed: English Status: 1. Active (can be completed) 2. <b>Completed</b> 3. Inactive 4. other...
