DATABASE ¹	
Name of the database	<p>WetColdMedForestPlant Database: a database concerning all plant taxa recorded from forest stands of <i>Pinus nigra</i> and <i>Abies</i> spp. in Spain and Greece. For each taxon available information on its fire-related life traits is provided.</p> <p>No URL address</p>
Scientific information	<p>Scientific domain(s) Forest Fire Ecology</p> <p>Objectives: This database acts as a data source for fire-related life traits of plant taxa inhabiting the commonest high altitude Mediterranean coniferous forests that are presently affected by wildland fires due to climate and demographic changes, i.e. <i>Pinus nigra</i> and <i>Abies</i> spp. forests.</p> <p>Characteristics of the stored data: At its present status, the database includes taxa recorded from forests stands in question from Spain and Greece, i.e. countries in the Western and Eastern part of the Mediterranean Rim, respectively. For each taxon the provided information concerns: (1) taxonomic status, (2) growth form, (3) fire related fire traits (e.g., resprouting, seed bank formation, long-dispersal potential, etc).</p>
